

Configuring Shortcut for Xyntax 8

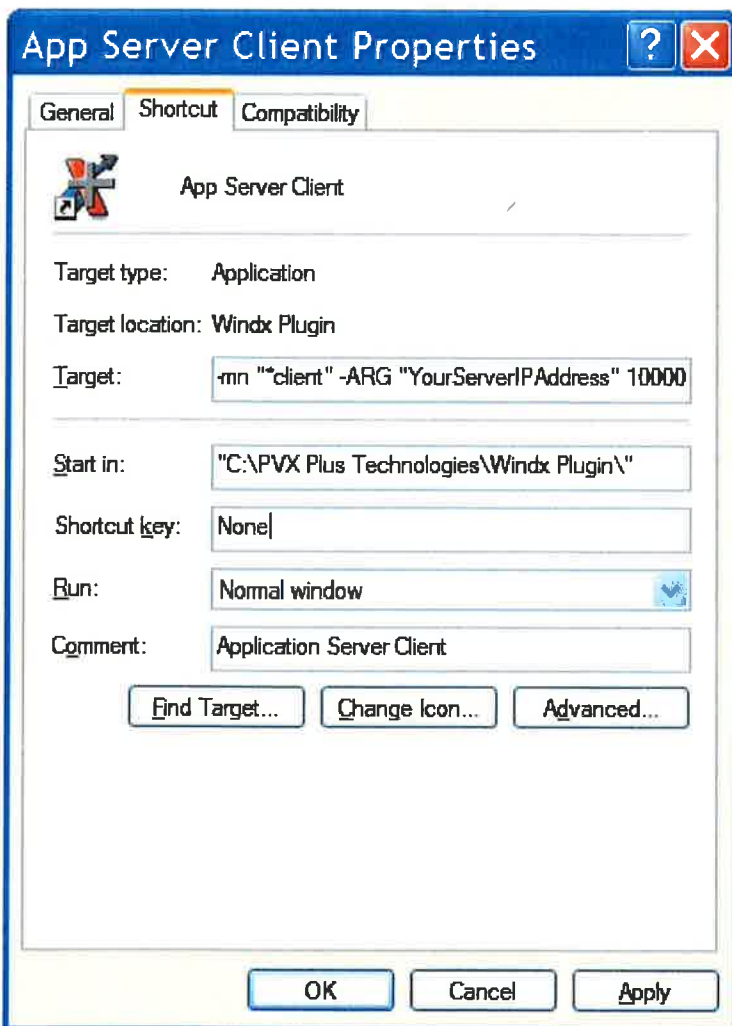

After the Windows plug-in is installed, you will need to create a shortcut on the desktop. The shortcut is specific to each client, and is not created by the installation for that reason.

Locate the application:

START => All Programs => PVX Plus Technologies => Windx (Plugin) => App Server Client

and copy 'App Server Client' to the desktop as a shortcut.

The properties for the default shortcut look like:

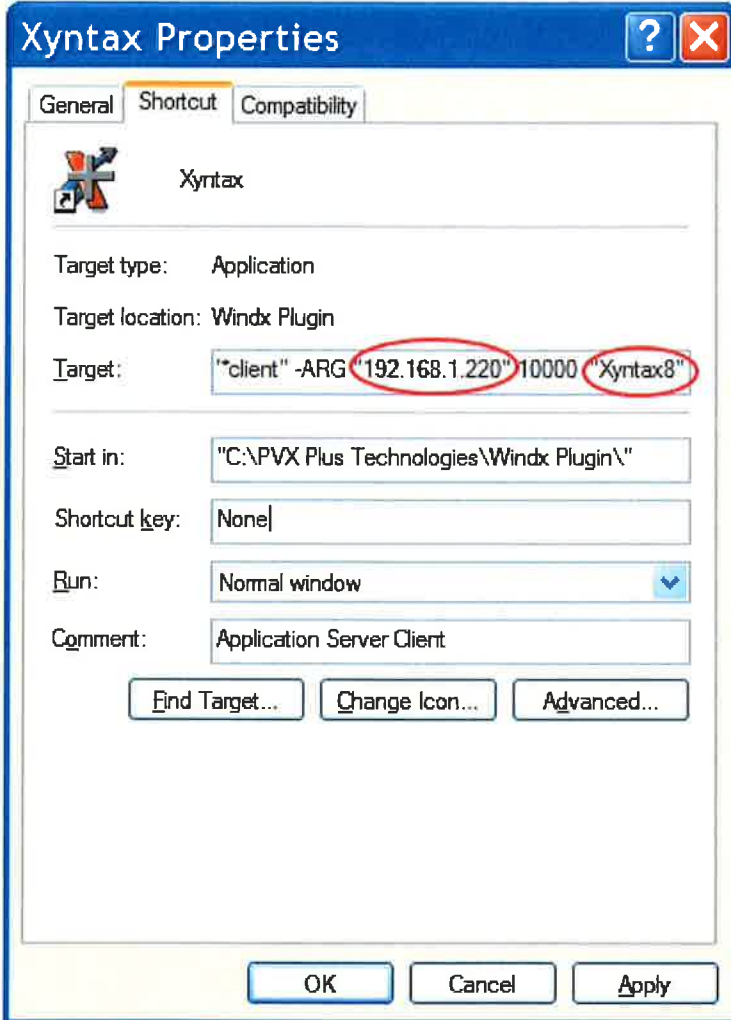

Now you need to change the Target line to connect to your server.

For example sake, we will pick 192.168.1.220 as our sample server address.

In this example, you would replace "YourServerIPAddress" with "192.168.1.220".

At the end of the Target line, after the number 10000, you need to add a space, then the application name "Xyntax8" in quotes. This application name is case sensitive.

So the changed shortcut properties will now look like:

Select 'Apply' and 'OK'.

The default shortcut will look something like:

Which you can rename:
